One Health in Action:
An Intensive Field Course in Sri Lanka

2 – 22 July 2017
http://globalhealth.ucdavis.edu

With global populations increasing rapidly, one of the most important concerns facing human-kind is ensuring health – including access to adequate, sustainable and safe food resources and water, human and animal disease prevention, resilient ecosystems and culturally appropriate health care. The health of our people, our animals, and our planet are highly linked and all are at risk given current trajectories.

This three-week action-oriented field course is designed for a collegial, inquisitive, multi-disciplinary group of students in human health sciences, veterinary medicine, agriculture, nutrition, and social and environmental sciences.* Participants must be committed to learning and working together to apply the One Health approach to important human, animal and environmental health problems. Eligible students will include professional degree students in medicine and veterinary medicine as well as graduate students in nursing, agriculture, nutrition, public health, social and environmental sciences from any university. Early career professionals are also encouraged to apply.

*Academic credit possible

For more information, please contact Jenifer Wang at jncwang@ucdavis.edu
